

NTP server install on linux

I installed NTP server on Ubuntu Server 10.04 using:

```
[crayon-662b2a4909f9d088531564/]
```

The NTP daemon seems working and listening on the 123 port.

However, I was not able to get the time from another machine:

```
[crayon-662b2a4909fab286153883/]
```

—

Remove previous version

```
[crayon-662b2a4909faf262598400/]
```

```
[crayon-662b2a4909fb3931981217/]
```

—

If you have ntpd installed on another machine, you can use your first server in the servers list of your ntp.conf file, or can synchronize one time with the -q option, as follows:

```
[crayon-662b2a4909fb7976931790/]
```
