

NTP server install on linux

I installed NTP server on Ubuntu Server 10.04 using:

```
[crayon-669e1dc33c6c2750944238/]
```

The NTP daemon seems working and listening on the 123 port.

However, I was not able to get the time from another machine:

```
[crayon-669e1dc33c6c8066672728/]
```

—

Remove previous version

```
[crayon-669e1dc33c6ca516629283/]
```

```
[crayon-669e1dc33c6cc545194056/]
```

—

If you have ntpd installed on another machine, you can use your first server in the servers list of your ntp.conf file, or can synchronize one time with the -q option, as follows:

```
[crayon-669e1dc33c6ce391625426/]
```
