Maximum capacity of IPTABLES rules, firewall rules.

normally 32 bit system and integer value of count of IP rules apprx.. some millions.

BUT I tested it myself on my SERVER.   **after 56 000 , (56 Thousands)** it becomes slower.

My server has SSD disk and 16 GB memory.

But this is changable. If you do good firewall script, You can use 2 million IP rules with best performance.
