

Open the XML file and read into a DataSet

```
using System;
using System.IO;
using System.Data;

public class MainClass {
static void Main(string[] args) {
if (args.Length != 1)
return;

FileStream fs = new FileStream(args[0], FileMode.Open);
DataSet ds = new DataSet();
ds.ReadXml(fs);

// Use a DataTable to display the members.
DataTable mt = ds.Tables["member"];
for (int row = 0; row < mt.Rows.Count; row++) { for (int col =
0; col < mt.Columns.Count - 1; col++) {
Console.WriteLine("{0,-10}{1}", mt.Columns[col].Caption,
mt.Rows[row][col].ToString().Trim()); } Console.WriteLine(); }
fs.Close(); } } [/csharp]
```
