

Recursive sum method

```
public class SumPrices {  
  
    public static double Sum(double[] p, int start, int end) {  
        if (start < end) return p[start] + Sum(p,start+1,end); else  
        return 0; } public static void Main() { double[] prices =  
        {1.3,    13.68,    314.919,    82.827,    363.949};  
        System.Console.WriteLine("The    sum    is    {0:C}",  
        Sum(prices,0,prices.Length)); } } [/csharp]
```
