

((an) | (in) | (on))

```
using System;
using System.Text.RegularExpressions;

public class MainClass {
public static void Main() {

Regex p = new Regex("((an)|(in)|(on))");
MatchCollection mn = p.Matches("King, Kong Kang");
for (int i = 0; i < mn.Count; i++) { Console.WriteLine("Found
'{0}' at position {1}",mn[i].Value, mn[i].Index); } } }
[/csharp]
```
