

Get HTTP Request Headers

```
using System;
using System.IO;
using System.Net;

public class TryHttpRequest {
    public static void Main(String [] args) {
        HttpWebRequest request
        =(HttpWebRequest)WebRequest.Create("http://www.kutayzorlu.com/
        java2s/com");
        HttpWebResponse response
        =(HttpWebResponse)request.GetResponse();
        request.Accept = "text/plain";
        Console.WriteLine("Request header count:
        {0}",request.Headers.Count);
        WebHeaderCollection header = request.Headers;
        for (int i = 0; i < header.Count; i++) Console.WriteLine(" {0}
        : {1}",header.GetKey(i), header[i]); } } [/csharp]
```
