

Query string array by its element length

```
using System;
using System.Linq;

class HelloWorld {
    static void Main() {
        string[] words = { "hello", "wonderful", "linq", "beautiful",
                           "world" };
        var shortWords = from word in words
                        where word.Length <= 5 select word; foreach (var word in
                        shortWords) Console.WriteLine(word); } } [/csharp]
```
