

# Creating New MVC Project

new MVC project,

File > New > Project > MVC 4 project.

1- Select ASPX instead of RAZOR Syntax,

2- Remove all of Other Content of Directories

– How to add Controller and return string, Which URL

>> Add new Controller !!! url localhost/ControllerNAME/  
[crayon-6684c3f73b533402067853/]

– How MVC calling controller, ?

Global.asax File calling route table, after route table  
calling controllers  
[crayon-6684c3f73b53a022626087/]

Route Config.cs > Called by Global.asax  
[crayon-6684c3f73b53c166327080/]
