

Use StreamWriter to create a text file

```
using System;
using System.IO;

public class MyStreamWriterReader {
    static void Main(string[] args) {
        StreamWriter writer = new StreamWriter("reminders.txt");
        writer.WriteLine("...");
        writer.WriteLine("Don't forget these numbers:");
        for (int i = 0; i < 10; i++) writer.Write(i + " ");
        writer.Write(writer.NewLine); writer.Close(); StreamReader sr
        = new StreamReader("reminders.txt"); string input = null;
        while ((input = sr.ReadLine()) != null) {
            Console.WriteLine(input); } } } [/csharp]
```
