

FaceRecognition SDK

- Real-time biometric authentication systems allowing the user to log in by simply looking into a webcam. FaceSDK enables touchless, non-intrusive biometric authentication;
- Time and attendance control systems;
- Video-based subject identification applications with no prior enrolment;
- Video surveillance systems with automatic face identification;
- Image organizers with face-based image search;
- Face animation effects for the entertainment industry;
- Automatic red-eye removal tools empowered with facial feature detection;
- Mobile applications for iOS and Android;
- Image enhancement applications and graphic editors.
