

JSF & JSF IMPL & javax.faces-spec – 1

JavaServer Faces technology simplifies building user interfaces for JavaServer applications. Developers can build web applications by assembling reusable UI components in a page; connecting these components to an application data source; and wiring client-generated events to server-side event handlers. This project provides information on the continued development of the JavaServer Faces specification.

- Eclipse Mojarra
- Oracle Mojarra
- Apache MyFaces
